

DataBeagle - ECM

Preventing Fraud and Data Leaks

The only action more effective than quickly reacting to data leaks is to prevent them in the first place. In this digital world we operate in, your organization's most valued asset is vulnerable to attacks that can quickly lead to expensive lawsuits. And it's more than your data that's at risk. Protecting sensitive customer information is your responsibility.

Identifying potential breaches as they're occurring across a variety of communication channels can be challenging. But with the right systems in place, it's not impossible.

Unlock Value Fast

The first time you identify a vulnerability, you'll realize how close you were to paying millions in damages.

Adopt Seamlessly

The goal of a good prevention process is to secure communications without the end-user even realizing anything has changed.

Optimize Cost

This system is customizable and adaptable to the changing needs of your organization, so your investment remains robust.

Operate Efficiently with Content Intelligence (HCI)

Automate functions based on policies that you set. Let the system do the heavy lifting so you can focus on your business.

Scope of Service What is included?

- Implementation of a highly-secure content platform (HCP) with retention, tiering, and legal hold capabilities
- Execution of a customizable, policy-driven workflow engine (HCI) that connects to multiple communications channels, such as Office 365, Skype, Bloomberg, Reuters, Algomi, Verint, and file shares
- Tailored user interface for quickly making decisions and acting
- Configuration of audit reporting for compliance
- Add-on module available for early case assessment
